

Highlights

- In week 48, individual local flu activity indicator trends were mixed. Overall, local flu intensity continues to be low and decreased slightly compared to the previous week.
- Geographic spread and local intensity designation (Click [here](#) for definitions) = SPORADIC, LOW
- Local medical facility labs reported 912 tests run with 3 (0.3%) positive results for week 48 of 2015. This is lower than last week's 1.1% and is lower than the weekly baseline.
- The percentage of ED visits for influenza-like-illness (ILI) and respiratory symptoms were both stable compared to week 47. The percentage of ED visits for both ILI and respiratory symptoms are higher than their baseline averages.
- In week 48 of 2015, trends for the local over-the-counter medication sales generally increased (increase in cough and cold, electrolyte, thermometer, pediatric anti-fever, adult anti-fever, and throat lozenge sales; stable chest rub sales) compared to last week.
- Nationally in week 48, influenza activity increased slightly in the United States but remained low overall. Please [visit the CDC website for specific information](#) (National data is usually updated on Friday of each week).

Local Flu Activity Dashboard *(All data are preliminary and may change as updated reports are received.)*

Reportable Conditions (Cumulative Numbers as of Dec 8, 2015, 12:00 PM)	2010	2011	2012	2013	2014	2015 YTD
Pediatric Influenza Associated Death Reported by Year (based on date of death)	0	0	0	0	0	0
Influenza Associated Hospitalizations (IAH) Reported by Admission Year ⁶	35	266	394	300	938	532
IAH comparison by Season (October - May or Weeks 35 - 20)						
2010-11	284	95	512	486	1,017	11
Current season (2015-16) is from week 35 through 48.						

¹Interpret with caution. Indicators with small numbers subject to large weekly percentage fluctuations.
²Number of weeks "▲" = Increase (>2%), "▼" = Decrease (>2%), "●" = Stable (-2% to +2%).
³Black line is current years data. Based on data availability, red line is historical average (excluding pandemic year).
⁴Data Source: Medical claims data from athenaHealth® (www.athenahealth.com). Rate of Flu or ILI visits to Franklin County, OH athenaHealth® network primary care practices/physicians.
⁵Franklin County, OH residents only (based on zipcode). NOTE: Excludes one hospital system included in the past due to technical changes affecting visit classification assignment and numbers.
⁶Confirmed cases only. Based on jurisdiction equal to Franklin County or City of Columbus and admission date available in ODRS.

CDC 122-Cities Mortality Reporting System: Pneumonia and Influenza (P&I) Mortality

In week 48 of 2015, 6.5% of all Columbus and Franklin County deaths were attributed to pneumonia and influenza. Nationally in week 48, 6.1% of deaths reported were attributed to pneumonia and influenza. This national percentage was below the national epidemic threshold of 6.6% for week 48.

Influenza Morbidity and Influenza-Like Illness (ILI) Reports

In week 48, the preliminary local influenza and influenza-like-illness (ILI) visit rate to athenaHealth® providers (2.2 per 1,000 visits) decreased compared to the previous week and is slightly higher than the baseline average for the week (Figure 1). The week 48 percentage of Emergency Department (ED) visits for ILI symptoms was stable compared to the previous week (Figure 3) and is higher than the historic baseline for the week.

Nationally, during week 48 of 2015, 1.8% of patient visits reported through the US Outpatient Influenza-like Illness Surveillance Network (ILINet), were due to influenza-like illness (ILI). The percentage is below the national baseline of 2.1% for week 48.

Laboratory Surveillance

During week 48 of 2015, reporting Franklin County sentinel medical facility laboratories tested 912 specimens, with 3 (0.3%) positive (Figure 4). The total number of tests done by local reporting labs from week 35 of 2014 through week 48 of 2015 is 9,722 with 75 (0.77%) positives (52 type A, 19 type B, 4 both A and B, 0 type unknown).

Nationally in week 48 of 2015, clinical laboratories reported 11,509 specimens tested for influenza viruses, 185 (1.6%) of which were positive (122 type A, 63 type B). Public health laboratories reported testing 787 specimens, 36 of which were positive (23 type A – of which 5 were A(H1N1)pdm09, 15 were A/H3, and 3 were not subtyped; 13 type B – of which 3 were Yamagata lineage, 3 were Victoria lineage, and 7 where lineage was not performed). Please visit the CDC website for more information, including cumulative data since week 40.

Participating Ohio clinical labs reported 6,109 specimens tested for influenza this season thus far. Positive results include: (1) A(H1N1)pdm09; (1) A/H3N2; (11) Flu A Not Subtyped, and (7) Flu B (through 12/5/15). ODH Public Health Lab reported 64 specimens tested for influenza from various submitters this season thus far. Positive results include: (2) A(H1N1)pdm09; (0) A/H3N2; (1) Influenza B (through 12/5/15). Please visit the ODH website for more information.

ED Respiratory Visits

In the 48th week of 2015, the percentage of all ED visits categorized as *respiratory* was stable compared to the percentage seen the previous week and is slightly higher than its historic baseline for the week (Figure 5).

Over-the-Counter (OTC) Medication Sales

In week 48 of 2015, trends for the local over-the-counter medication sales generally increased (increase in cough and cold, electrolyte, thermometer, pediatric anti-fever, adult anti-fever, and throat lozenge sales; stable chest rub sales) compared to last week.
